                                                                                                                                                                                                                     Treating and preventing cancer, an immune system disorder (e.g., 2 acquired immune deficiency syndrome (AIDS), Addisorder (e.g., 2 affecting and preventing cancer, an immune system disorder (e.g., 2 affecting growth and development (e.g., arteriosclerosis, cirrhosis, 2 affecting growth and development (e.g., hypertension, myocardial) infarction, Goodpasture's syndrome), and a lipid disorder (e.g., fatty 2 liver, Gaucher's disease, Niemann-Pick's disease, hypercholesterolaemia, Obesity), and for assessing the effects of exogenous compounds. Anti-PKIN antibody is useful in a diagnostic test for a 2 condition or a disease associated with the expression of PKIN in a biological sample. A composition comprising PKIN or an agonist of a condition decreased or increased expression of functional PKIN. 2 associated with decreased or increased expression of unctional PKIN. 2 condition is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PKIN DNA is useful for creating and in somatic or germline gene therapy. The present sequence is human for many and in somatic or germline gene therapy. Rosen CA, Barash SC, Ruben SM;

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 25701; 3071pp + Sequence Listing; English

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and care treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased cexample, they may be used to treat disorders associated with decreased cexample, they may be used to treat disorders associated with decreased cexample, they may be used to produce the nactive proteins or to supplement the patients own production of (I). Additionally, (I) concepts and send be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent; and cancer metastases of haematopoletic acids: AAK64703 to AAK87694 represent human immune/haematopoletic antigen genomic sequences from the present invention. AAK54942 to AAK5590 and AAM82169 represent sequences used in the exemplification of the present invention AAK54951 to AAK64702 encode the human immune/haematopoietic antigen amino acid sequences given in AAM82170 to AAM91921. (I) have cytost

Nucleic acids encoding useful for preventing, metastasis human immune/hematopoietic antigen polypeptides, diagnosing and/or treating cancers and

Disclosure; SEQ Ħ ö 38916; 3071pp + Sequence Listing; English.

amino acid sequences given in AAM82170 to AAM891221. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) controlled treatment of diseases may be used in the prevention, diagnosis and controlled treatment of diseases associated with inappropriate (I) expression. For controlled the activity of the controlled treatment of a patient's genome controlled the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) controlled tides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, controlled acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, controlled acancer metastases of heematopoletic derived cells. AAK64703 to AAK87694 represent human immune/haematopoletic antigen genomic sequences from the present invention. AAK84942 to AAK54950 and AAM82169 contents a sequences incoming the account invention. AAK54951 to AAK64702 represent sequences used in the exemplification of the encode the human immune/haematopoietic antigen present invention and

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis

Disclosure; SEQ ID NO 25704; 3071pp + Sequence Listing; English

AAK54951 to AAK64702 encode the human immune/haematopoletic antigen (I) amino acid sequences given in AAM62170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to provent, diagnose and treat immune/haematopoletic-related diseases, especially cancers and cancer metastases of haematopoletic-derived cells. AAK64703 concers and cancer metastases of haematopoletic antigen genomic sequences from the present invention. AAK84942 to AAK84950 and AAM82169 crepresent sequences used in the exemplification of the present invention.

                                                                                                                                                                                Alignment Scores:
                                                                                                                                                                                                                                  amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic concers and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For cexample, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to complement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent. (C) classome and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic actived cells. AAK64703 to AAK97694 represent human immune/haematopoietic actived cells. AAK64703 to AAK97694 represent invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
       The invention relates to identifying a compound which binds to a Kinase (cencoded by a nucleotide sequence of 1868, 403, 545, 361, 473, 3001, 526, 683 or 1448 base pair (bp) as given in the specification) comprising contacting the kinase with a test compound under suitable conditions for binding, and detecting binding of the compound to the Kinase. The method is useful for identifying a compound which binds to the kinase and also for isolating compounds which modify the activity of the kinase. The identified compounds are useful for treating a subject having a clisorder characterised by aberrant kinase activity where the disorder includes cellular growth related disorders which includes a disorder, clisease, or condition characterised by a deregulation, e.g. and compound the to deregulation of cellular growth, Cellular growth ceregulation due to deregulation of cellular proliferation, cell cycle progression, cellular differentiation and/or cellular hypertrophy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             14765 GAGCACGGCTACCGACAAATCGCTTCCCCTTCTGGGTTTTGGTTGCTTAGGCGCGGTGGA

The kinases and antibodies raised against them are useful in one or more method such as screening assays, predictive medicine and methods of treatment. The nucleic acid molecules are useful for expressing kinase and phosphatase protein (e.g. in gene therapy applications), to detect kinase and phosphatase mRNA or a genetic alteration in a Kinase and phosphatase gene and to modulate kinase and phosphatase activity. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cardiovascular disorders such as heart failure, hypertension, fibrillation, dilated cardiomyopathy, idiopathic cardiomyopath anginal, proliferative disorders such as cancer (including melanginal)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental blology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511).

New polypeptides, useful for diagnosing, treating or preventing disorders of growth and development, cardiovascular and lipid, diseases such as cancer, comprise human kinase polypeptides New polypeptides, useful for diagnosing, disorders of growth and development, car and

Claim 5; Page 178-179; 197pp; English.

The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition containing PKIN agonist is useful for CC corresponding cDNAs. A composition containing PKIN agonist is useful for PKIN and a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating CC disorders include cancer (leukaemia, adenocarcinoma, lymphoma, melanoma, CC myeloma, sarcoma, teratocarcinoma, Hodgkin's disease); immune disorder (Acquired Immune Deficiency Syndrome (AIDS), asthma, Addison's disease, autoimmune thyroiditis, gout, bronchitis, Crohn's disease, diabetes ce continuous, multiple sclerosis, Good pasture's syndrome, Graves' disease, contendative, multiple sclerosis, Good pasture's syndrome, Graves' disease, contendative, multiple sclerosis, Good pasture's syndrome, Graves' disease, contendative, multiple sclerosis, Good pasture's syndrome, Graves' disease, contendative, and development disorders syndrome, vestis, ulcerative colitis, contendative, and development disorders (arteriosclerosis, cirrhosis, hepatitis, contendative heart failure, angina pectoris, myocarditis, cardio contendative heart disease, chronic bronchitis, lung tumours); lipid conscity of a test compound and in gene therapy. The present sequence is human PKIN-5 cDNA.

Nucleic acids encoding human kinase polypeptides, useful for preventing diagnosing and/or treating e.g. cancer, immune, cardiovascular and neuronal-associated diseases, and microbial infections

Example 1; Figure 1; 433pp; English.

cc novel protein kinases have been identified as members of the tyrosine cc or serine/threonine kinase (PTK and STK) families. The polynucleotides cc encoding protein kinase (PTK and STK) families. The polynucleotides cc encoding protein kinase and the polypetides may be used in the cc inappropriate kinase expression. For example, they may be used to treat cc cancers (especially cancers of haematopoietic origin), cardiovascular cc disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), cc immune related diseases (e.g. rheumatold arthritis), neurological cc disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. cc.) earkinson's disease), inflammatory disorders (e.g. asthma), infectious cc disease (e.g. HIV) and reproductive disorders (e.g. asthma), infectious cc disease (e.g. hIV) and reproductive disorders (e.g. infertility). cc Additionally, polynucleotides encoding protein kinases may be cused for gene therapy and as DNA probes in diagnostic assays. The protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify condulators of protein kinase expression and activity.
